ACTION ITEMS:

AREA OF CONCERN: Two LMVOA and four BNA samples had low recoveries for up to four DMCs.

**COMMENTS/CLARIFICATIONS
REGION 6 CLP QA REVIEW**

CASE 42562 SDG F5WB4 SITE Manufacturing Specialties, Inc. LAB A4

COMMENTS: This SDG consisted of seven soil samples for LMVOA and BNA analyses following CLP SOW SOM01.2. MS/MSD analyses were not requested.

The SOW requires that the soil sample results be adjusted for moisture content as well as dilution when applicable. The adjusted CRQLs, frequently higher than the CRQLs specified in the SOW, were reported by the laboratory and are referred to as SQLs in this report.

Standard Review was performed for this data package as requested by the TDF. The compound of concern with an action level of 5,900 mg/kg is toluene. The compound of concern was not detected in any of the samples. BNA sample F5WC0 was analyzed at 10X dilution only because of high background levels.

DATA ASSESSMENT: The QC problems affecting data usability are addressed below.

LMVOA

- The 1,4-dioxane failed the technical minimum RRF criterion for one point of the IC. However, since the calibration data demonstrated the instrument sensitivity at the CRQL, the reviewer did not qualify the 1,4-dioxane results.
- The reviewer qualified as estimated and biased low the results associated with VDMC6 for samples F5WC1 and F5WC3 because this DMC had recoveries below the QC limit for these two samples.

BNA

- Because of laboratory contamination, the laboratory "B"-flagged results below the SQLs for di-n-butylphthalate should be considered undetected and were flagged "U" at the SQLs on the DST.
- The reviewer qualified as estimated and biased low the results associated with the following DMCs for the listed samples because these DMCs had recoveries below the QC limits.

DMC	Sample
SDMC9	F5WB8, F5WC2, F5WC3
SDMC12	F5WB8, F5WC2
SDMC15	F5WB8, F5WC1, F5WC2, F5WC3
SDMC16	F5WB8, F5WC2

CASE 42562 SDG F5WB4 SITE Manufacturing Specialties, Inc. LAB A4

OVERALL ASSESSMENT: Some results were qualified for two LMVOA and four BNA samples because of problems with DMC performance. ESAT's final data qualifiers in the DST indicate the technical usability of all reported sample results. An Evidence Audit was conducted for the CSF, and the audit results were reported on the Evidence Inventory Checklist.

The laboratory was contacted for a reporting issue (see Resubmission Request). The laboratory response is not expected to impact the DST, so the DST included in this report is the final version.

ORGANIC DATA QUALIFIER DEFINITIONS

The following definitions provide brief explanations of the ESAT-Region 6 qualifiers assigned to results in the Data Summary Table.

- U** Not detected at reported quantitation limit.
- N** Identification is tentative.
- J** Estimated value.
- L** Reported concentration is below the CRQL.
- M** Reported concentration should be used as a raised quantitation limit because of interferences and/or laboratory contamination.
- R** Unusable.
- ^** High biased. Actual concentration may be lower than the concentration reported.
- v** Low biased. Actual concentration may be higher than the concentration reported.
- F+** A false positive exists.
- F-** A false negative exists.
- UJ** Estimated quantitation limit.
- T** Identification is questionable because of absence of other commonly coexisting pesticides.
- C** Identification of pesticide or Aroclor has been confirmed by Gas Chromatography/Mass Spectrometer (GC/MS).
- X** Identification of pesticide or Aroclor could not be confirmed by GC/MS when attempted.
- *** Result not recommended for use because of associated QA/QC performance inferior to that from other analysis.

LMVOA

Summary of Questions/Issues:

According to SOM01.2, p. D-15/LOW-MED VOA, sec. 7.2.2.3, 0.25 ug of each IS should be added to the samples and calibration standards. This would result in an IS concentration of 25 ug/L for the 10 mL low level soil purging mix. However, the quantitation reports for all low soil calibrations and analyses in this SDG reported an IS concentration of 50 ug/L. Furthermore, only by using the SOW-specified IS concentration (25 ug/L) can the reviewer reproduce the reported RRFs and sample results. Please explain this discrepancy.

NOTE: Any laboratory resubmission should be submitted either as an addendum to the original CSF with a revised Form DC-2 or submitted as a new CSF with a new Form DC-2 except for replacement pages (SOM01.2, p. B-33, sec. 2.6.3). Custody seals are required for all such shipments.
